

## DVTEL Mobile Applications

With the DVTEL Mobile application, users can monitor and control various aspects of the security system on Android or iOS devices. Users can connect from any location over any IP wireless network and react to incidents in real-time.

This solution is critical to the changing environment of physical security incident investigation. Now, a mobile device can be taken into the field so that a situation can be monitored and decisions and actions can be made instantaneously based on the best information available.
