

The DVTel Traffic Violation module integrates DVTel's Latitude Network Video Management System (NVMS) with a traffic and parking enforcement solution, providing local authorities the ability to capture the details of witnessed traffic violations from within ControlCenter. The integration sends the captured offence data to the traffic violation system for further processing.

The integration utilizes Latitude's plug-in technology, incorporating an easy to use ControlCenter plug-in interface. The interface allows operators witnessing traffic or parking violations to initiate offence captures indicating the Start and End times of the witnessed offence and the relevant offence details.

Upon saving the offence, the integration will automatically send the offence details to the traffic violation system and bookmark the associated video with the operator's Start, End or Void operation details.

DVTel's Professional Engineering Services (PES) Group provides custom automation and operation and third party integration to DVTel's intelligent Security Operations Center (iSOC) platform so that every DVTel solution has the ability to be tailored to meet the requirements of the customer.

## DVTel Traffic Violation Integration Capabilities

### Offence Capture

- Integration provides ControlCenter interface for operators to initiate the capture of a witnessed traffic or parking violation.
- Operators can select to Start, End or Void offences and enter the details of witnessed offences.
- Easy to use interface in AdminCenter allows administrators to automatically import all camera policy data from XML files.
- Imported camera policy data is automatically populated within ControlCenter's offence capture interface for the currently selected camera, allowing for operators to select the relevant offence data for the viewed camera.
- The capture interface in ControlCenter will create a bookmark for the associated video's Start, End or Void times once a witnessed offence is saved.

### Video Clip Conversions to AVI

- A windows service component running at configured scheduled times of low system usage converts exported DVT clips to AVI format, allowing for traffic or parking violators to review the recorded video of their captured offence.

### Events

- The integration provides an indication if the connection to the traffic violation system is gained or lost.
- The integration will dispatch an event in Latitude upon issues in successfully sending captured offences to the traffic violation system.
- Users can utilize Latitude's Event/Actions infrastructure to conduct any supported Latitude actions upon events, allowing administrators to be alerted upon server accessibility loss or errors in successfully sending offence captures.
