

DVTel Improves Security at Nottingham East Midlands Airport *iSOC IP-based solution used to prevent and investigate security incidents*

Birmingham, UK, May 8, 2006 -- DVTel Inc., multiple award-winning market leader in the development and delivery of intelligent security solutions over IP networks, today announced that Nottingham East Midlands Airport is utilizing the DVTel intelligent Security Operations Center (iSOC) solution for improved security and incident review. Nottingham East Midlands Airport sees over 4 million passengers pass through its doors each year, is the UK's 2nd largest cargo airport, and the largest fast parcel hub in Europe.

DVTel is the solution of choice worldwide for mission critical and enterprise level installations, and the iSOC is installed in more than 25 major airport and transportation hubs around the globe.

The East Midlands installation, managed by officers of the Leicestershire Constabulary, comprises over 50 cameras covering key security locations within the airport. All camera views are sent over a dedicated network for monitoring and storage at the operations center located in the airport facility. The system design is aimed at the non-technical user and, as such, all members of the police team operate the system with ease and little or no training.

“Whether it is a Fortune 500 headquarters or somewhere as critical as Nottingham East Midlands Airport or Bangkok International Airport, the DVTel iSOC delivers the ease-of-use, flexibility, and scalability to provide our end users with a highly-functioning, cost effective security solution,” said David Petrook, DVTel UK/EMEA Managing Director. For East Midlands, they have a system that meets their needs now and as their security needs grow, the system will expand to meet those demands in the future.”

The East Midlands system records 24/7 and future plans call for integrating alarms into the iSOC as well as potentially expanding camera coverage upwards to a doubling of the current system. Soon after installation, the system began proving its value not only in ease of operation, but in providing enhanced security.

Digital footage from the DVTel iSOC has been used a number of times as legal evidence, and police operations staff has conducted incident review to help solve crimes including theft, assault, disorderly behavior, and trespassing into secure areas. The system can also be used to verify who has or hasn't boarded a particular flight.

About Nottingham East Midlands Airport

Over 4 million passengers pass through the doors of Nottingham East Midlands Airport (NEMA) every year. Through NEMA, part of The Manchester Airports Group, travellers can reach more than 90 business and holiday destinations in Europe, Africa, the Caribbean, North America and Mexico. Recently voted 'Best UK Airport' at the British Travel Awards 2005, NEMA is a 'gateway' to national and international markets, endorsed as such by the Government. Its central location, close to key road and rail routes, within four hours drive of most of the UK, makes it as important for both passenger and cargo movements to the UK as a whole, as for the region. The Airport is the second largest cargo airport in the UK, after Heathrow.

About DVTel

DVTel is leading the transition from closed, proprietary security systems to open, standards-based platforms. We are the solution of choice worldwide for mission critical and enterprise level installations because of our unified command and control operating platform. Our systems are found in thousands of installations around the globe.

DVTel's software and hardware components are unified into the intelligent Security Operations Center (iSOC) V5 platform, which enables the end user to operate, monitor and administer all video, audio, access control, visitor management, credential creation, analytics and alarm monitoring assets—anytime, anywhere. The iSOC V5 is the first unified services platform that offers a complete rules-based, distributed architecture. With the most innovative products and world class service giving you the freedom to run your business...that's a complete solution and The Complete Picture.

DVTel, iSOC, Latitude, Longitude, Altitude, SceneTracker, CaseBuilder, Mentor, NetTalk are registered trademark of DVTel Inc. all other company names and products are trademarks or registered trademarks of their respective companies.
