

DVTel Showcases Latest Video Analytics Solution at ISC West
Addition to intelligent Security Operations Center strengthens platform offering

Las Vegas, NV and Ridgefield Park, NJ, March 28, 2007 -- DVTel, Inc., ranked number one in market share by IMS Research and multiple award-winning market leader in the development and delivery of intelligent security solutions over IP networks, today announced the latest Video Analytics software suite for their intelligent Security Operations Center (iSOC) will be on display at ISC West.

The Latitude V5 Video Analytics solution is designed to automatically detect threats and distribute intelligent alerts in real time, enabling security personnel to effectively manage threats, not just focus on detecting them. This solution is fully unified with Latitude Network Video Management (NVMS) V5 for superior control between analytics and video monitoring and recording.

“Because of the powerful architecture of the iSOC platform, you now have the freedom to choose Latitude’s Video Analytics module or another that better suites your needs,” says Yaniv Ben-Arie, DVTel Director of Research & Development. “We’ve developed our offering based on extensive customer input and the video analytics solution is another example of the tremendous flexibility of our software-based product.”

Latitude V5 Video Analytics utilizes a distributed architecture for video analytics deploying analytics either at the edge, at the server, or a combination of both. Such distributed architecture provides cost effective scalability of up to 70 analytics channels per server without any limitation of the number of detections per channel. With iSOC, video analytics capabilities can scale from one camera to thousands – either IP-based or analog-based.

The breadth of different detection algorithms allow deployment in various types of installations including retail, enterprise, city centers, government facilities and many more. DVTel’s Professional Services team can leverage this new technology by offering customized applications to provide customers with solutions to real life threats.

Furthermore, Latitude Video Analytics is a component within DVTel’s iSOC platform, which allows integration to multiple vendor applications using iSOC’s SDK (Software Development Kit).

About DVTel

DVTel is ranked #1 in market share by IMS Research in North America in the Network Video Software market. With more than ten awards for products and innovation, DVTel is both a pioneer and the dominant market player in the creation, development, and delivery of Multi-source Intelligence Systems over IP networks. Our software-based solutions create superior value by providing our customers a unique level of freedom to focus on what's most important—their primary business goals.

DVTel's unified intelligent Security Operations Center (iSOC) V5 combines Longitude IPAC, Latitude Network Video Management (NVMS), video analytics capability, as well as other powerful management modules to create a rich integration platform that offers a single, highly intuitive graphical user interface. iSOC V5 is the only open standards, IP-based security management center that unifies all video, audio, data, access control, trend analysis and alarm management functionality into one enterprise physical security center.

DVTel is leading the transition from closed, proprietary security systems to open, standards-based platforms. DVTel's unified solutions leverage existing network infrastructure while providing unmatched levels of flexibility, scalability, cost-effectiveness—all backed by superior customer support. We are the solution of choice worldwide for mission critical and enterprise level installations and our systems are found in thousands of installations around the globe.
