

DVTel Expands Smart Security Solutions Mobile App Line

Free, advanced applications enable video monitoring and recording on the go

Ridgefield Park, NJ, May 12, 2011 -- DVTel, Inc., multiple award-winning market leader in Smart Security Solutions for video surveillance, today announced that the company continues to expand its line of supported smart devices within its Mobile Applications capabilities.

DVTel's Mobile App includes support for the Apple iPad and iPhone along with Android and Microsoft Windows phones. This smart device app is an exciting, highly functional environment for real-time, on-the-go live video monitoring and recording. As a part of DVTel's Smart Security Solutions, this complementary, advanced application allows users to monitor multiple cameras at one time, change the viewing pattern with a single touch, control PTZ cameras, integrate advanced video analytics, review playback of recorded video, and start and stop recording. All in real-time.

Integration with Google Earth further increases mobile guard safety and productivity by pinpointing an incident's location on a map and by zooming in on alarms and viewing place marks. The Mobile App solution works on both 3G and WiFi networks so that constant connectivity is achieved.

This solution fills a critical need in the rapidly-changing environment of physical security incident investigation. Now, a mobile device can be taken into the field so that a situation can be monitored and decisions and actions can be taken instantaneously based on the best information available.

"More organizations require immediate business impact and return on investment in today's challenging economy. With this technology, the ability to integrate multiple edge data points and customize your system enhances the value beyond traditional security," said Vered Shinar, Vice President of Professional Engineering Services. "At DVTel, we focus on providing a flexible solution that can be adapted to your needs. If you have a challenge that needs customization, talk to DVTel."

The Mobile VMS Apps are products of DVTel's Professional Engineering Services (PES) Group, which provides integration and advanced applications that are unified with DVTel's intelligent Security Operations Center (iSOC) platform. With the advanced infrastructure of the iSOC platform, every DVTel Smart Security Solution can be tailored by the PES Group or by your own development team to meet the specific requirements of each customer.

See all of DVTel's Smart Security Solutions live at IFSEC 2011 at Stand 4/E20 in Birmingham, UK the week of May 16, 2011.

About DVTel

DVTel develops, designs, and provides smart security solutions for video surveillance that help protect critical infrastructure -- in transportation hubs, city centers, nuclear and power facilities along with buildings and campuses of corporations, educational institutions and government facilities. We tie together leading edge IP-based cameras and encoders, with built-in analytics capabilities that detect and report security threats, creating a powerful security "edge". Using our Intellectual Property for the design and integration capabilities, we manage these edge devices through our versatile and highly scalable Latitude video management system. DVTel's solutions address the security needs of single locations requiring as few as two to three cameras, as well as those with global operations and thousands of video channels spread throughout a continent or around the world.
