

DVTel's Professional Engineering Services Group Expands Services

"If You Can Dream It, We Can Do It"

Ridgefield Park, NJ, July 29, 2010 -- DVTel, Inc., multiple award-winning market leader in the development and delivery of intelligent security solutions over IP networks, is pleased to announce a series of upcoming webinars to share the many successes of the DVTel Professional Engineering Services team, so that you too can benefit from their rich library of integration modules.

DVTel puts its money where its mouth is. DVTel has long touted its iSOC single Operating Platform as an integration platform that integrates its video platform with access control systems, video analytics systems, License Plate Recognition systems, Perimeter Fence Detection Systems, and much more. DVTel backs this claim with its award winning Professional Engineering Services team.

You won't want miss these webinars which focus on this key differentiator for DVTel. If you are a VAR, come and hear how DVTel can help you to provide your customers with a strategic value add. If you are an End User, come and hear how you can improve the productivity of your Security Operators and staff with the systems you already own. PES Apps can make your security staff more effective at their jobs by showing them the complete picture in one Graphical User Interface (GUI) or map. They will be able to distinguish critical incidents more easily from the numerous suspicious activities they confront. We offer many PES integrations as off-the-shelf modules, and we can build a custom integration to satisfy your specific scenarios so that the integration will allow your security staff to be more efficient in their analysis and investigations.

DVTel PES has built dozens of integrations and custom applications. Here is but a small sample.

- Google Earth
- Traffic parking violations module
- Chat Room Plug-in
- Voice Evacuation System

For the past few years DVTel customers have enjoyed the benefits of DVTel's Professional Engineering Services group, which takes the intelligent Security Operations Center (iSOC) to the next level from a traditional enterprise video management solution. The acquisition of ioimage and growing success in the central station and managed video market accelerate the need to expand services into these new markets.

The expansion of the PES organization allows DVTel customers in the manage video and central station arena to develop add on application and integration to improve business efficiency, compliance and integration to existing solutions to get the best return on

investment. PES is available to consult with companies to understand these unique requirements and then help build a plan to develop the exact solution that is needed.

“The future is about collaboration and a strong network platform that makes decisions on the fly”, says Vered Shinar, Vice President of Professional Engineering Services. “Our customers require the ability to integrate multiple products and services into one intelligent management platform, giving them the opportunity to scale the solution while taking full advantage of systems speed and agility which saves peoples lives and money in the security industry.”

DVTel’s PES group provides the most extensive tools and customization services available today. Third party solutions can integrate to DVTel’s iSOC, or the iSOC can integrate to third party solutions...it can even be a combination of both. With PES’ customer-centric approach to integration, application creation, customization, and training, PES takes the iSOC experience and opens the door to endless possibilities.

DVTel is hosting a series of webinars to familiarize the industry with the PES capabilities. Below are the webinar subjects, dates and registration information:

Meet DVTel's Professional Engineering Services Group

And See How All Things are Possible

About DVTel

DVTel’s unified intelligent Security Operations Center (iSOC) combines the DVTel Latitude Network Video Management System (NVMS), iomage intelligent video analytics, and advanced DVTel applications to create a single operating platform for Security Operations. iSOC is also a rich integration platform that brings in other applications such as access control, perimeter fence detection, license plate recognition, and many more into a single, highly intuitive graphical user interface. DVTel’s iSOC is the only open standards, IP-based security management center that unifies all video, audio, data, access control, trend analysis and alarm management functionality into one enterprise physical security center. DVTel offers a complete line of world class security grade IP cameras and encoders and is integrated with hundreds of cameras from multiple manufacturers.

DVTel’s unified solutions leverage existing network infrastructure while providing unmatched levels of flexibility, scalability, and cost-effectiveness—all backed by superior customer support. DVTel is the solution of choice worldwide for mission critical and enterprise level installations and these systems are found in thousands of

installations around the globe. For more information, go to www.dvtel.com. To follow on Twitter – go to twitter.com/DVTel_Inc.
