

DVTel Releases Solus Video Management System (VMS)

Entry level, single server software solution for IP-based video surveillance

Ridgefield Park, NJ, September 21, 2009 -- DVTel, Inc., multiple award-winning market leader in the development and delivery of intelligent security solutions over IP networks, today announced the release of its IP-based video surveillance software for the entry-level marketplace.

For over ten years, DVTel has been the market trailblazer in IP-based Physical Security solutions. True to that legacy, DVTel has developed the Solus Video Management System (VMS) to support configurations of up to 32 cameras. This out-of-the-box solution is perfect for installations where the end user requires a networked solution and is looking for a single server solution.

Available today, Solus VMS boasts the following end-user benefits:

- Easy to use, feature-rich Video Management System
- Supports multiple video compressions including H.264, MPEG-4, and MJPEG
- Most flexibility option on the market for viewing, recording, and exporting audio and video
- Integrates with legacy CCTV and hundreds of third-party IP cameras and encoders
- Provides multi-level user access rights for added security
- Interactive system administration dashboard for ease of configuration and maintenance

As with all DVTel products, Solus VMS is based on open-standards and uses the latest technology to create the most user-friendly solution on the market today. Solus VMS displaces the antiquated CCTV matrix switch, multiplexer, and DVR and offers the power of a cutting-edge IP-based physical security solution in an all-in-one software solution.

DVTel President and CEO, Eli Gorovici commented on the release of Solus, "DVTel is known as the leader in enterprise level solutions. We are bringing this same level of expertise to a packaged solution that will fully satisfy the needs of those customers who are looking for an out-of-the-box solution. Even though we label this an entry-level product, it is a highly robust system that runs on a single server and has the proven power and functionality of DVTel technology behind it."

DVTel's new Solus VMS product can be seen at ASIS International 2009 in booth #4409 or online at www.dvtel.com/solus

About DVTel

DVTel has the largest installed base of end-to-end IP physical security solutions in the world and is the recipient of over ten awards for products and innovation. As the pioneer and dominant market player in the creation, development, and delivery of Multi-source Intelligence Systems over IP networks, our software-based solutions create superior value by providing customers a unique level of freedom to focus on what's most important—their primary business goals.

DVTel's unified intelligent Security Operations Center (iSOC) V6 combines Longitude IPAC, Latitude Network Video Management (NVMS), video analytics capability, as well as other powerful management modules to create a rich integration platform that offers a single, highly intuitive graphical user interface. iSOC V6 is the only open standards, IP-based security management center that unifies all video, audio, data, access control, trend analysis and alarm management functionality into one enterprise physical security center.

DVTel is leading the transition from closed, proprietary security systems to open, standards-based platforms. Our unified solutions leverage existing network infrastructure while providing unmatched levels of flexibility, scalability, cost-effectiveness—all backed by superior customer support. We are the solution of choice worldwide for mission critical and enterprise level installations and our systems are found in thousands of installations around the globe.
