

## DVTEL Cardax (F) Integration - DVTEL as Front End Applications & Integration Center

The DVTEL Cardax (F) integration module integrates DVTEL's Latitude NVMS with Cardax access control system. The integration provides the means for handling targeted access control events generated by Cardax within Latitude.

The DVTEL Cardax (F) is a powerful integration that provides two-way communication between Latitude and Cardax allowing Latitude operators to monitor Cardax events and alarms right from the Latitude interface. All Cardax events and alarms are conveniently delivered to Latitude's ControlCenter where a user can act upon the event or alarm, display an associated Latitude camera or query for past events by event type, cardholder name, card number and date & time.

Similarly as with Latitude events, users can configure actions upon Cardax events and alarms, such as starting recording upon Access Denied event. Moreover, users can also configure Cardax actions upon Latitude events, such as unlocking a door. The integration also supports dispatching of Latitude alarms in Cardax.

DVTEL's Applications & Integration Center (AIC) group provides custom automation and operation and third-party integration to DVTEL's intelligent Security Operations Center (iSOC) platform so that every DVTEL solution has the ability to be tailored to meet the requirements of the customer.

# DVTEL Cardax (F) Integration - DVTEL as Front End

## Events triggers and actions

- Cardax events are dispatched in Latitude containing the description of the event.
- User can configure many Latitude actions that will be executed by dispatched events from Cardax. For example: Upon door open event, send a camera to a pre-defined preset.
- User can query video according to input received from Cardax. For example: query for all incidents / video Adam Smith was involved with.
- Latitude NVMS alarms can be sent to Cardax. If this alarm is acknowledged in Cardax, all instances of that alarm type in Latitude NVMS will be acknowledged in Latitude NVMS.
- User can configure any Latitude NVMS event that is configurable via AdminCenter, to perform an action in Cardax. For example, whenever there is accessibility lost for a camera, Latitude NVMS will request Cardax to lock a door.

## Recording and playback

- If an alarm is triggered due to a Cardax event, camera will start recording; if Control Center tile was armed for a live view of the the camera will pop in the tile.

## System

- Users can start and stop the integration service from the configurator tool.
- Users can monitor connection to External System Items in Cardax.
- The integration acknowledges Latitude alarms, which were sent to Cardax and were acknowledged in Cardax.
- The integration supports Failover Directory.
