

## DVTEL Bogen Integration Applications & Integration Center

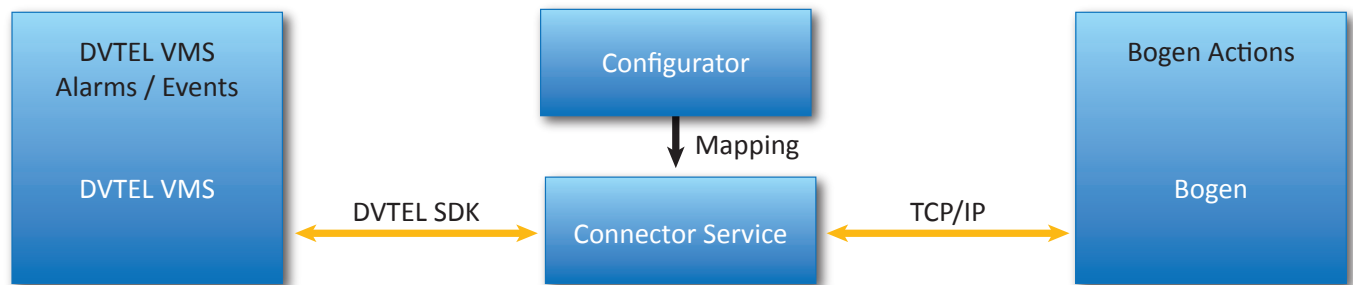

The DVTEL-Bogen module integrates DVTEL's Latitude, Horizon and Meridian VMS systems with Bogen's Quantum Commander.

Bogen's Quantum Multicom IP is a comprehensive communications network that connects administrative areas and staff locations in a single building, multiple building sites throughout a facility, or an entire campus. Quantum Commander is the web server-based configuration and control application for the Quantum system.

The DVTEL-Bogen integration provides a means to perform actions in Quantum Commander (such as sounding alarm tones, playing emergency messages or controlling audio distribution) upon Latitude or Horizon v6.4 alarms and supported events. Setup of the rules mapping DVTEL events to the requested Bogen actions is performed from a standalone Configurator application.
