

## DVTEL S2 Integration (F) - DVTEL As Front End Applications & Integration Center

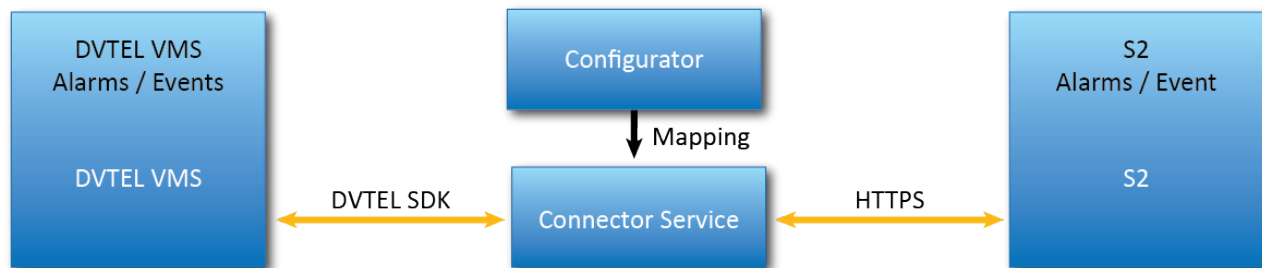

The DVTEL-S2 (F) module integrates DVTEL's Latitude and Horizon NVMS systems with S2's access control system.

The integration provides a means to trigger or clear alarms in DVTEL's Video Management Systems (VMS) - Latitude, Horizon and Meridian as a result of S2 access control events. The Latitude installation also supports the dispatching of "External Events" upon S2 events.

The standalone Configurator application sets up rules mapping S2 events to the requested handling in the VMS. The Configurator allows users to easily select the access control event and define the VMS action to be performed upon it.
